    "body": "[03.12.2021 23:01:08] <best> sorry for the long response, had to step
back quickly\n\n at the moment I'm monitoring html and internal components\nso I
pass the bots to the guys to work (but I think I will ask another person to do it,
to make it faster) \nbspIn html let's think:\Basically, I always update 2 parts -
html lend (there is a protection link inside lend) and appx files (to these files
and point to html lend) \nappx files I put on azure and sometimes my cookies delete
the server on azure (when analysts complain) and so I have to update and html lend
itself\n in order to make everything as competent as possible, to make it as smart
as possible. Ideally, I want to update only appx files without touching html
band\nfor example, you can make it so that when the band opens, it sends a request
to a server and gets an answer with a link to appx files and puts them into the
button on the band\nthen it will be possible to change host appx files without
changing even the html band itself\n[03.12.2021 23:01:45]
<best> or work like now, when the mikes remove the azura server, I update the
html lend and update the appx files and then send you the html lend and you
change it and everything runs"
